**Notes:** Rats exposed for 4 hours to test atmosphere. The Acute Inhalation  $LC_{50}$  of this material places it in EPA Toxic

Category IV.

EYE EFFECTS: Irritation clearing within 72 hours.

**SKIN EFFECTS:** No irritation noted at 72 hours. Irritation Index = 0.5

SENSITIZATION: Negative; Not considered to be a dermal sensitizer to albino guinea pigs.

**COMMENTS:** None of the components present in this material at concentrations equal to or greater than 0.1% are listed by IARC, NTP, OSHA or ACGIH as being carcinogens.

Carcinogenicity/ Oncogenicity - Slightly elevated incidences of benign tumors of the thyroid and liver were seen in rats following lifetime administration of high doses of Pyrethrins. Further detailed scientific studies into the mode of action responsible for these effects show that:

- 1) Because of biological species differences, the rat thyroid tumors are not relevant to humans.
- 2) The rat liver tumors occur in animals only at doses greatly exceeding human exposure levels and that cause cell proliferation

(mitogenesis).

Based on these data, the USEPA has classified Pyrethrins as "Not Likely to be Carcinogenic to Humans," at doses that do not cause a mitogenic response in the liver/ cell proliferation. Thus, Pyrethrins can be considered to be non-carcinogenic at exposure levels relevant to human use of Pyrethrins-containing products.
