Hi-Yield® Crop Oil Concentrate is a balanced system of oil and surfactants designed to be used with herbicides and defoliants that call for an oil adjuvant. **Hi-Yield® Crop Oil Concentrate** may be used as a replacement for crop oils and surfactants added to herbicide and defoliant spray programs.

RECOMMENDED RATES

Always follow pesticide manufacturer's label directions. **Hi-Yield® Crop Oil Concentrate** is compatible with most oil-soluble herbicides. Check the particular brand labels to be sure that use with a crop oil is not prohibited on the label.

BRUSH CONTROL: For weed and brush control foliage sprays, use 1.28 oz. of **Hi-Yield® Crop Oil Concentrate** per gallon of finished spray. For increased efficacy in late season sprays, use 2.56 oz. **Hi-Yield® Crop Oil Concentrate** per gallon of finished spray.

Since **Hi-Yield® Crop Oil Concentrate** may increase the activity of herbicides, care should be exercised in applying it with herbicides to new varieties or highly inbred lines or under weather conditions, such as high temperatures and high humidity which tend to increase herbicide activity. The use of test areas is recommended if these conditions prevail. Due to variation in natural water compositions, formulations by brand, and types of agitation, pre-testing of the intended tank mixture is recommended.

MIXING

Fill spray tank one-half full of water, add the desired amount of herbicide and continue filling. Add correct amount of **Hi-Yield® Crop Oil Concentrate** last and continue agitation.

HANDLING AND STORAGE

Store in a cool, dry place in original container. Do not store near oxidizing agents. Keep container closed in storage. Do not allow water to be introduced. If **Hi-Yield® Crop Oil Concentrate** is stored below 20 °F for an extended period, it may become cloudy and thicken. By raising the temperature above 32 °F the product will return to its normal clear and fluid state.
