

Winterizer For Established Lawns

25-0-6

Tell the Difference in How Your Grass Multiplies in the Spring!

- Builds winter hardiness
- Strengthens root systems during the winter on various grasses
 - Ideal for all types of trees, shrubs, ornamentals & evergreens

KEEP OUT OF REACH OF CHILDREN

NET WEIGHT 40 LBS. (18.14 KG)

ferti-lome® Winterizer For Established Lawns

Consultation of the Consul

DIRECTIONS FOR USE

We recommend this package of **ferti**•lome® **Winterizer For Established Lawns** because a fall feeding can help prevent winter damage to lawn grasses, and you do not lose as many valuable trees, shrubs, ornamentals and evergreens due to hazards of a cold winter.

1. WHAT IS THIS PACKAGE FOR?

This product is especially formulated to help put your lawn, trees, shrubs, ornamentals and evergreens in proper condition to withstand the hazards of a cold winter, because it helps on the hardening of late growth and helps build root systems. Root growth goes on throughout the fall and winter. Recommended for fall and winter uses.

2 HOW DO YOU USE IT?

ESTABLISHED LAWNS:

Apply 4 lbs. of **ferti•lome**® **Winterizer For Established Lawns** per 1,000 sq ft. using the spreader settings in table below. The maximum number of broadcast applications per treatment site is 2 per year. Water thoroughly after application.

Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Apply this product only to your lawn/garden, and sweep any product that lands on the driveway, sidewalk, or street, back onto your lawn/garden.

APPLICATION EQUIPMENT AND INSTRUCTIONS

This product can be applied with a drop or broadcast (rotary) spreader. For best results, apply this product evenly and uniformly over the turfgrass (lawn) area avoiding streaking, skips or overlaps.

Before each application, determine the correct amount (lbs.) of product to place in the spreader hopper for the area to be treated. For example, if the label states to apply 4 lbs. per 1000 sq. ft. and your area is 2000 sq. ft, then place 8 lbs. of product in the hopper and set the spreader setting at 4 1/4 (per table below) if using an Accugreen drop spreader.

A more uniform application can be made by spreading one-half of the recommended amount of this product over the turfgrass area and then applying the remaining one-half of this product at a right angle to the previous application direction.

NOTE: The spreader settings listed below are approximate. The speed at which you walk and the working condition of the spreader will affect the rate of application.

Spreader	Spreader Settings 4 Lbs. of product per 1,000 sq. ft.
Scotts®/Republic Accugreen (Drop)	4 1/4
Scotts®/Republic Speedy Green (Broadcast)	3 ¾
ferti•lome®/Farthway Fv-N-Spred (Broadcast)	14

TREES: It is very important to fertilize your trees. Well-fed trees not only grow faster and develop into better shade trees, but well-fed trees normally are not damaged as extensively by tree borers and other insects as poorly fed trees. Fertilize trees by applying 1 lb. of **ferti lome Winterizer For Established Lawns** for each inch of trunk diameter. Apply to ground out under the widest spread of branches. Water thoroughly.

SHRUBS, ORNAMENTALS, EVERGREENS: Apply ferti•lome® Winterizer For Established Lawns by sprinkling a light coating on ground out under the widest spread of branches at the rate of 1 cup of fertilizer for every 3 ft. of plant height. Prorate the amount for larger or smaller plants accordingly.

ROSES, AZALEAS, CAMELLIAS AND GARDENIAS: ferti•lome® Winterizer For Established Lawns can be used for the fall feeding of Roses, Azaleas, Camellias and Gardenias by following the directions listed above for shrubs. Water well.

CAUTION: DO NOT OVER APPLY NEAR SHRUBS AND TREE TRUNKS.

NOTE: Not recommended for container grown plants!

3. HERE ARE THE RESULTS YOU MAY EXPECT!

When used as directed, **ferti**•lome® **Winterizer For Established Lawns** aids in increasing winter hardiness, helps build better root systems aids hardening of late fall growth, and promotes sturdiness in plants weakened by too rapid growth.
