

Horticultural Oil vs Dormant Oil

ferti•lome® “Green” Label Horticultural Oil

- Contains: 96% Canola Oil (Highly Refined)
- May be used in all seasons.
 - Dormant: Will work if it freezes after the application dries, daytime over 35°.
 - Growing Season: Will NOT burn plants when used at under 90° if plants are hydrated (watered, not drought stressed).
- If temps are over 90°, water plant 24 hours prior to application, apply in early morning or very late evening.
- Has some surface fungus control properties.
- This is your BEST Spidermite Control!
- Apply any time of the year!

Available in two sizes:

16 oz. 16042

32 oz. RTS 16045

Both products control almost all stages of insects – eggs, nymphs and adults – by suffocation.

Hi-Yield® Dormant Spray

- Contains: 98.8% Mineral Oil
- Has Temperature Restrictions.
 - Dormant: Use on a day over 50° where it doesn't freeze for 24 hours afterwards.
 - Growing Season: Will burn plants when used at or over 90°. (Can burn, even if sprayed after dark if temp is over 90°).
- Has NO surface fungus control properties.
- Apply in the Early Spring or Late Fall.

Available in three sizes:

16 oz. 32033

32 oz. 32034

Gal. 32043

Always read and follow directions.

Always spray Oils in the early morning.
