43040
Grub Control

Grubs Are Controlled Within Days

Use On All Types of Turfgrass

Mimics the action of a natural insect hormone that induces the molting and metamorphosis process in insects.

Is highly active against grubs and lepidopterous larvae listed as target pests.

Controls listed larvae through a novel mode-of-action that starts within hours of ingestion. Actual death of larvae may take several days to occur.

UPC Number 7-32221-43040-2
17 lbs  64 bags per pallet
